SUCCESS STORY OF MR. MOHAMAD SHAAN

Mr. Mohamad Shaan, a 26 year old male from Lucknow sustained head injury on 01/01/2011. Mr. Shaan was treated surgically and was discharged with gross instability and in-coordination of upper and lower limbs. Mr. Shaan was completely dependent on his father for basic and instrumental activities of daily living. Mr. Shaan was referred to CRC Lucknow.

Mr. Shaan's view of his problem and health functions was extracted via interview based on biopsychosocial model and global, service programme and cycle goals were identified within the components of functioning. For the goals and intervention targets identified, the multi-disciplinary rehabilitation interventions were shared between physiotherapist, occupational therapist, orthotist, speech therapist and clinical psychologist.

After 6 weeks of rehabilitation, Mr. Shaan has shown improvements in all domains of functioning and is now able to walk independently for short distances without losing balance, able to eat and dress on his own and can take care of his personal activities of daily living. Mr. Shaan is optimistic about his future and is hoping to return to his previous trade of managing his shop after successful rehabilitation.
